

Physical and Human Geography Knowledge Organiser

- I know where the continents are located.
- I know the capital cities of countries in Europe.
- I know and can name the significant physical features across the world. I know where some of these physical features are located.
- I know the effect that different biomes have on the physical features present in different environments.
- I know where the world's most significant rivers are located.
- I know what the water cycle is.
- I know what natural disasters are and how they are caused.
- I know how natural disasters effect the local area they are in. I know that people migrate for economic reasons and for reasons of personal safety. I know that both immigration and emigration have positive and negative impacts on communities
- I know how the country being studied uses its natural resources and how these resources are traded with other countries.
- I understand the problems pollution cause for all living things and how the government of the country being studied causes or manages its environmental impact.
- I know the measures in place locally, nationally and globally to protect the environment and can explain the long-term consequences if these measures are not effective/implemented. I can explain how climate change will impact the planet
- I can explain how climate change will impact the planet. I understand my personal responsibilities to reduce my negative impact on the environment.

The Amazon

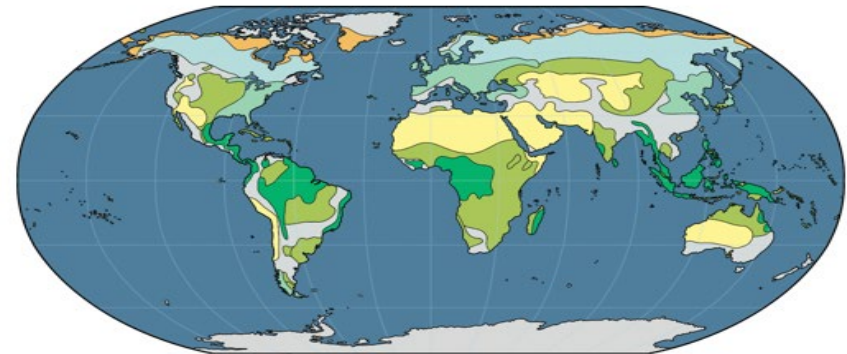

The Amazon River is the second longest river in the world and has the largest capacity. The river is six miles wide at its widest point.

The River Nile

The Nile is 6,650km long, making it the longest river in the world (although some argue that the Amazon is longer). The river is located in north-eastern Africa and runs through Sudan, Burundi, Rwanda, DR Congo, Tanzania, Kenya, Ethiopia, Uganda and Egypt.
