

I really enjoyed our visit to the 'Get up to Speed with STEM' event on Wednesday 29<sup>th</sup> March. My friends and I really enjoyed the crane exhibition where we had to pick up the magnet from the floor and bring it back up. My favourite exhibition was the crime scene though. One of my friends thought that the pasta was actually real maggots! I think I might a career in crime detection when I am older.

The most memorable event was when the McLaren engine started and the smoke came out of it!

Thank you so much for letting us attend this amazing event.

From Marley

I enjoyed the experience at Magna called 'Get up to speed with STEM' on Wednesday 29<sup>th</sup> March. With my friends, I had the chance to discover a range of different exhibitors. My favourite was probably the Scalextric because I got to ride a bike to power the car. My other favourite was the McLaren where you could sit inside the car. My last favourite was the army because you could talk to the people running the stall and touch the training weapons and supplies.

After the event, I decided that when I am older I do not want to become an actor any more, I want to be an inventor to make new and improved things.

Thank you for letting us attend the event. We really enjoyed it.

From Joshua

I enjoyed the experience of 'Get up to Speed with STEM' because of how many different stalls there were! My favourite stalls were the

McLaren, the mini-explosions and the magnets! The magnets had a blue and a red end and the top magnet ended up floating! I think as a career, I would explore and find out about different types of magnets.

Thank you for letting our school attend!

From Holly J

I thoroughly enjoyed our amazing visit to the 'Get up to Speed with STEM' on Wednesday 29<sup>th</sup> March. With my friends, I saw a green McLaren have its doors and engine started! It was such a thrilling experience.

I also had the chance to explore other incredible exhibitor's stalls. My ultimate favourite was a stall with a challenge using a microscope. The challenge was to see how many tubes fit into this box. It was a lot harder than I thought it would be. Through the microscope you could look closely at a lung, kidney and liver. I discovered they had to put a purple mark on the glass so you could see it better.

When I am older, I am interested in a job where you have to use technology to help keep us healthy.

Thank you for letting our school attend this amazing event.

From Kayla

I extremely enjoyed our visit to the 'Get up to Speed with STEM' on Wednesday 29<sup>th</sup> March. There were so many exhibitors who all ran small stations. My favourite station was probably the 'ARM' station as you could build a robot and because I love engineering. However, there were other stations I also enjoyed such as a VR head set station.

Another experience which made it through to my list of ultimate favourites is probably the crime scene as you could solve a very fun and interesting mystery with logistics.

Overall, I LOVED the event and it really helped me think about my career.

Thank you so, so much for allowing us to attend this amazing STEM event.
